Bluetooth, SMS and horny feedback is a mandatory work for me. How to install a GSI on your Mi 11t Pro, this will clean the phone and I am not responsible for any brick device. Did you try that? How are you at your end ?? Do you really have any difference between 60Hz and 120Hz? The question is that I can not use the touch screen on TWRP when on Android 12. Please help. It's working well with 12.5, I have a problem. I'm planning to blink pe gsi. If so, what did you do to fix? Restart for Fastboot) unzip the platform tools and move your GSI, VBMETA and Magisk.img (if necessary) to the Platform Tools folder Abra a terminal. Without 5g mode? P.S. Everything has been displayed on slot b (not changed nothing) now the brightness of the screen works, the D2TW is working and passes the safetynet, everything works without problems? I don't know what "flashing via magisk manager" means, but I assume this goes through recovery. So, what is the best GSI for our beloved device? what am I doing wrong? Thank you very much! Where do I find the VBMETA image.img what did you mention? If you have time and are willing to help. I don't understand why ... All done 3 steps must be "Fastboot Flash System *.img" yes, thanks. All done in the last edited: February 27, 2022 How to upgrade: 1. RECOGNITION RECOVERY FASTBOOT 11. Text messages work in all GSI, you are just doing this: IMS/ Install the IMS APK for Qualcomm Supplier - Reinicialization. For Magisk, you will find the initialization image attached to MIUI 13 and the extracted VBMETA. Unzip the stock MIUI 13 .tgz at © Get the folder with Flash all.Bat Copy Flash all.Bat and Images is your Fastboot folder connect the phone to your PC and start the Flash all file and let the phone restart Fastboot 1.2 flash gsi --- Disable-verificação flash vbmeta vbmeta.img (estoque ou google) ./fastboot flash System ./fastboot flash System . Clean flash ensures that your slot A and B is correct, sometimes things get messy, this prevents other problems later in the last edited: April 3, 2022 olão, pixels ... wipe data in mi recovery 12 . I managed to get out of the fastboot, flashing vbmeta.img, but my system is back in stock. If you choose to install Magisk, use this mother to help arrest safety applications and fix a yourself. I show magisk in regular fastboot mode. I did everything via TWRP in the past, I want to make sure I'm doing it right. What GSI did you try? why? THX really strange sound of the speakers. Erase Fastboot 9 system. All the roms are problems, even though it was, is that everything? I blinked a lot, I still remember how I did this vibration is a supplier problem, it depends on the version of the MIUI you used as a base. 1.3 Flash Magisk How to correct the boot.img Extract Boot.Img from the inventory ROM Cap for the work phone with the Magisk Application. Copy your patched boot.img for your folder Fastboot Flash Boot Patchedboot.img. Google VBMETA, for configurations/configurations/configurations PhH tender and enable these configurations Oualcomm Resources/Disable Sondvolume Effects & Use Alternative Udio POLATIC -Audio Bugs Bugs Xiaomi RESOURCES/Activate DR2W Tool to wake up resources Mis/Force FPS/120Hz -(only if you want 120Hz) IMS/IMS APK Installations for Qualcomm Supplier SMS works than to restore to apply the volume steps for high corrections here is not necessary for all GSI GSIS to improve the battery and the performance to get better gcam I use MTSL SNAPCAM 7.1 With Antykat v13 We thank Phhusson, Last edition: Friday, 16:42 Reaijars: Jerry8538 I am using GSI instruments of op ./fastboot --- disable-overy --- disable-overy --- disable-overy I did not use for mii 13 first, I do not know why I should, ugui, as instruction, op ./fastboot --- disable-overy --- disable-o should, what image did you install? And before you do that, check the selection boxes on the same screen if text messages do not work. The Fastboot erasure system is showing failed. I tried Pixel Slim, Arcana 5.0 and lineage 19 and none of them have vibration. In addition, how did you not update it to the first, which VBMETA.img you used in the first step? I had to go back to the Miii 13 stock and the SMS application works perfectly, yes, it just displayed the Pixel Experience Slim and can not receive or send msgs the last edition: 8 of Baby 2022 after Flading the AOP (PHH), I get stuck in the Fastboot Loop. In addition, how do such a horny feedback also known as vibration? Last edition: April 4, 2022 I am fine with the hiptic not working for now. Finally, I found a better and perfect work solution: Pixel Experience Slim works because it is below 3 GB. I just displayed Magisk.img Trough Fastboot and worked. You can deactivate sound enchantments in PhH and Viola configurations tried to flashes magisk.img in the Magisk manager, but no root for me. You can also blink the initialization image with TWRP. Is there any personalized ROM with vibration? I blinked 5.0 And the vibration is not working ???? FASTBOOT-DISABLE-VERIFICATION VBMETA FLASH VBMETA.IMG (see VBMETA EXTRACTED IN MIUI ATTACH 13) 8. REACTIONS: PIMPO154125 I HAVE A PROBLEM. Last edition: 10 of Baby 2022 How to install a GSI on your Mi 11t Pro, this will clean the phone and I am not responsible for any device in bricks. But it is a break of business and needs to work. You can blink boot. Fastboot (for Fastbootd) 3. or I would show it with the Twrp. I am currently 13.0.1. My steps: ADB restoration of the initialization of initialization Fastboot Reboot Fastboot-Disable-Verity-Verification Disable Vbmeta VBMETA.img (VBMETA Extracted from Miui 13) Fastboot System Recot Reboot, I don't know for sure why OP and others ask you to reflect the rom Inventory in the innio, when you are already in V13.0.1. Any idea? Working: -gpay -bluetooth -5g, come back, vowifi (with correction) -Sstere -Faladores -Auto -Brightness (but better with the Velis AutoBrightness app)) It's not working: - Increase to wake up -ok google (because of the slim versions) ROM is working very smooth, without restarting and without problems you applied for 5g, come back and vowifi? I'm planning to blink pe gsi. It shows some mistakes, but is still initializing for the configuration screen. I don't know if this is new, but it worked when I was on Android 11, it doesn't matter. Turn off 6. But I was not lucky with the TWRP flashing minmicrog, I think because of the Twrp you can not decrypting Android 12 yet. Awesome Man rebootes and did 13. I tested all the other constructions of the And I only had problems. Fastboot Flash *.img (use the slim versions of pixel experience as before) 4. restart and activate the magsik moms and restart again ... Suggested clean cleaning! 1.0 Start by downloading the latest things from the platform Stock Miui 13 Here, latest GSI Fastboot to choose here or get the arcana the 5.0 gsi here 411, I will be fine with the hiptic not working for now. I still have Pixelexperience, do you have a link to the VBMETA image? : It's not working on Los19, I tested it. Finally, I found a better and perfect work solution: Pixel Experience Slim works because it is below 3 GB. But Bluetooth and SMS need to work. VBMETA MIUI13, Google below if you choose to install Magisk, use this mother to help include Google Download Boot Patched.img below or correct one you. Fastboot Flash all vili global images v12.5.10.0.rkdmixm 2021111.0000.00 11.0 global 2. How to install a GSI on your Mi 11t> Pro, this clean your phone and I am not responsible for any blank device. I really love this rom. I tried many times, but I never thought of restarting the device. And let it initialize once mmmm, if you can be kind enough and wrote the process for clean installation, or point me to the written already. Thnx 4 The really strange help. Fastboot Flash System Pixelexperience_arm64-Ab-Slim-12.0-20220221-unofficial.img 10. The sound is very bad in the first initialization. Never use GPay, but all other things work. I don't know what "flashing via magisk manager" means, but that this goes through the recovery. Fastboot Flash System *.img (use the slim versions of pixel experience as before) 4. I am not used to do so with my old old Like the OnePlus 7 Pro and Nexus 5 and Nexus 5 and Nexus 5. Reajações: Bariz143 Works Text Messages in all GSI, you are just doing this: IMS/Install IMS APK for the Qualcomm Supplier - Restart The. Insane rom. When I type the "Fastboot Flash System GSI.img" command, I get a "Target report reported Max Image size 8958495 bytes", the no. Thanks, Page 5, I had vibration working at PE Slim, maybe that's how we installed it? Thanks Volt and Vowifi through the IMS configurations feature and, by additional 5g, displayed by the Magisk (I found it somewhere here in the Xda) Reactions: Donjamal Charging Fast Works on Pixel Experience Page 3 Reaction: Donjamal can not do this more makes it work more .. 12.5 Automal shine does not work. Here is my new steps: 1. First, I made a clean Fastboot Flash using: vili global images v12.5.10.0.rkdmixm 20211111.0000.00 11.0 global I got the VBMeta folder that is inside the image folder. I changed hi, can this work on 11T non pro? P.S. Everything has been displayed on slot b (not changed nothing) now the brightness of the screen works, the D2TW is working and passes Safetynet, is there a way to allow vibration? I'm at T-Mobile Hu and I worked smoothly. It's a lot of work if you move from Miui to GSI, but it's worth it. Forgets. This gave me an error that it is not enough space in the part of the system. I'm not just a guy trying to find something better than pi. It doesn't work for me. Can anyone help with this? You can always go back to stock and try again. I did everything as OP wrote. RECOBOOT REBOOT FASTBOOT 11. Can you link the experience of the Pixel Experience? From now on: all in Fastbootd (restoration Fastboot) 7. 1.3 Flash Magisk How to correct the initial patch Then copy your initialization of patches. For configurations/configurations of PhH tende and allow these configurations of PhH tende and allow the second volume Xiaomi/Enable DR2W MISC RESOURCES/Disable MISC Resources/Force FPS/120Hz (If you wish 120Hz) IMS/Install IMS APK resources for any supplier than restart to apply the volume steps for a high correction here is not required for all GSIS to be settled. Bhammler, are these stupid GSIS? It is really working well and is my driver DIARARY. And after that, I'm stuck on the Fastboot screen. I am not a dev only a guy trying to find something better than pi. OMG, you are a rescue. I just made a post about vibration and what good is this rom in thread gsi for pe, you can also blink the initialization image with the Twrp. It passes the Safteynet, also the DT2W is not working, but I use the gravity screen app. Why is my not working. I tried to change the ADB versions yet the same problem, yes, just found out. Last edited: February 23, 2022 How to Update: 1. Work Commands: Fastboot --- Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-Verify-Disable-V Fastboot (= Fastbootd) Fastboot Flash System Pixelexperience arm64 -AB-VNDKLITE-2,0 20220208-UNOFFICIAL.Img recovery FASTBOOTA DATA RECOVERY (MI RECOVE) Fastbootd!) Flash boot magisk.img that worked for me, thanking for more updated information the form. Suggested clean cleaning installation! 1.0 Start by downloading the latest things from the platform here Stock Miui 13 Here Rom Fastboot I use EEE 13.0.8.0 GSI Here or get the latest GSIS from Telegram Vbmeta Miui13 MiUI13 Rom.
